

Construction is Coming: Help Keep Midvale Moving

The I-15 Southbound project area has experienced population and economic growth that has outpaced transportation capacity. The result is increased traffic congestion in the area, particularly during peak commute times.

To *Keep Utah Moving*, UDOT is adding a southbound lane to I-15 from 12300 South to S.R. 201, improving the I-215 interchange and widening 7200 South by one lane in each direction west of the freeway, including two reconstructed railway structures over 7200 South for UTA and Union Pacific Railroad.

During construction it is important for area businesses and employees to work together to help reduce traffic congestion during rush hour by rethinking their trip and applying TravelWise actions.

Adjust Travel Times

Adjust your schedule to travel during a less-congested time of day.

Save Time: Traffic doubles during peak hours on I-15.

Take Transit

Consider taking the bus, train or other forms of public transportation for your daily commute.

Improve Health: Studies show that transit users take 30% more steps each day than those who rely on their cars.

Carpool or Telework

If possible, avoid congestion altogether by teleworking or maximize time during your travel by carpooling.

Save Money: Teleworking just once a week could save as much as \$800 a year.
